Re: Annual Reporting Requirements for KRS 160.325

Gentlemen:

The attached report is submitted pursuant to KRS 160.325 for fiscal year 2014/15 which in part required:

Mandatory annual filing of a state-wide report with the Department for Energy Development and Independence (DEDI) and the Legislative Research Commission on the status and development of energy management plans by boards of education and the anticipated savings to be obtained by those plans.

This year's report was initiated by a letter under Energy and Environment Cabinet Secretary Dr. Len Peter's signature to school superintendents on August 1, 2015 requesting that districts submit their fiscal year 2014/15 Energy Management Report. A template was sent to school districts asking for specific information on conditioned square footage, energy usage, and cost by energy source. Of the 173 school districts, 100% have fulfilled this request. This year's report has been compiled by the School Energy Management Project within the Kentucky School Boards Association

An Energy Use Intensity, EUI, which shows the energy use (KBtu) per square foot, has been calculated at a statewide level and for each reporting district. For the base year of fiscal year 2009/10, the statewide EUI index was 65.4 KBtu/sf/yr. The year's EUI number has significantly improved by dropping to 57.6 KBtu/sf/yr.

The corresponding cumulative avoided cost to date from consumption reduction, rate corrections, rebates, refunds and utility case interventions is over \$68 million.

Overall observations and conclusions for the reporting districts when comparing to base year 2009/10:

- The conditioned square footage has increased 6.3%.
- The total energy use (MMBTU) has decreased 6.5% even with the addition of over 6 million square feet.
- The total expenditure of energy for public school districts has increased 6.8% since FY2010.
 - The spend of electricity has increased 9.7%
 - The cost per kwh of electricity has increased 16.3%
 - The spend of natural gas has decreased 32%
 - The cost per ccf of natural gas has decreased 26.7%
- In addition to the lowering of costs of natural gas, greater cost increases for electricity have been mitigated by ensuring school districts are on the correct rates and by focusing on reduced electrical demand in districts where energy managers are present.

A key player in this focused effort continues to be the School Energy Managers Project (SEMP) which was initially funded with a \$5 million dollar federal economic stimulus grant during FY2011 – FY2012 and managed by KSBA. SEMP helped place and train 35 energy managers to serve 130 school districts. In 2014 and 2015 SEMP was recognized nationally as an ENERGY STAR Partner of the Year for Energy Efficiency Program Delivery. Today there are 50 energy managers serving 86 districts.

- Following expiration of the stimulus funding, KSBA procured some \$2.3 million in new funding to enable SEMP to continue assisting Kentucky's 173 public school districts with statutory compliance that directs local boards of education to focus on rising energy costs that are straining their budgets and to support the Governor's initiative "Intelligent Energy Choices for Kentucky's Future". This new funding includes:
 - A \$700,000 grant from the Kentucky Energy and Environment Cabinet, effective April 2013 through June 2016
 - A \$1.45 Million "Energy Management Program for Schools" from the state's largest electric utility providers, Louisville Gas and Electric and Kentucky Utilities, to facilitate matching funds and support for 25 energy managers for the three-year period July 2013 through June 2016
 - A \$125,000 two-year grant from the Kentucky Power Company funding SEMP management staff and providing matching funds to support energy managers
 - SEMP continuance funding of \$2.85 million for FY2017 and 2018 is expected to be forthcoming from LGE/KU and Kentucky Power based on commitments made in recent rate cases.

Also of interest is that there are 33 districts who reported active energy performance contracts to help them reduce their energy usage and costs.

Please address questions or comments to;

Fuel Oil Cost Statewide, \$	\$ 312,075	\$ 537,382
Fuel Oil Rate Statewide Average, \$/gal	\$ 2.47	\$ 2.32
Coal Usage Statewide, tons	1,013	1,607
Coal Cost Statewide, \$	\$ 127,131	\$ 219,444
Coal Rate Statewide Average, \$/ton	\$ 125.56	\$ 136.58
*The base year has been adjusted by proxy for districts that did not report in FY2010		

Figures 1 and 2 show the distribution of district Energy Use Intensity values compared to the base fiscal year 2009/10 and the most recent fiscal year 2014/15. Comparisons of these figures show a lowering of the overall average and a tightening of the distribution. Several school districts are operating more efficiently today than the best district was in 2010 – the best got better along with most everyone else.

Figure 1

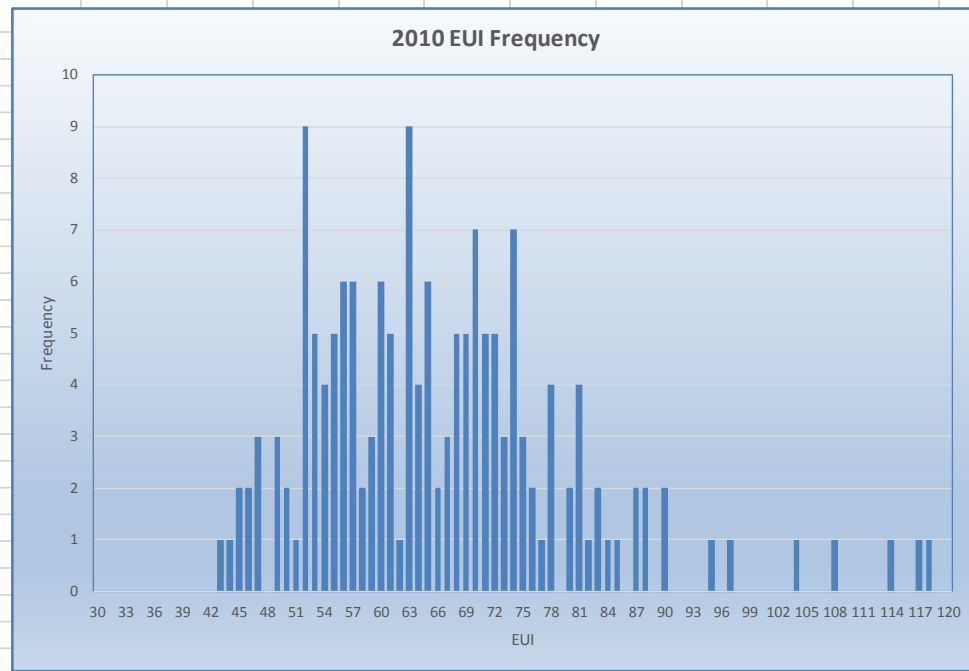

Figure 2

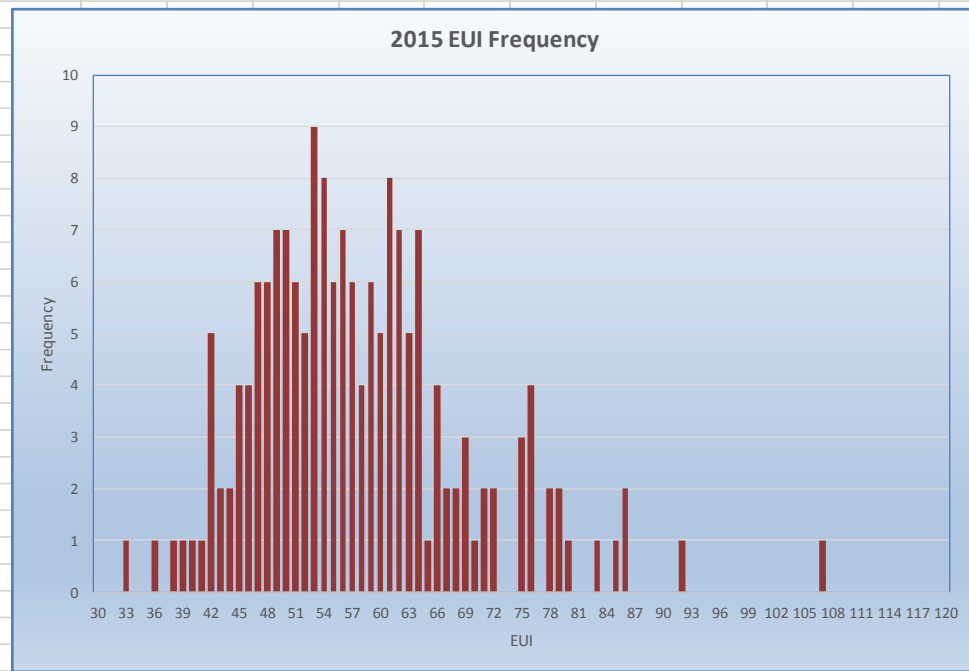

Figure 3 shows an Energy Use Profile comparing the base and current years. Statewide this shows that roughly 2/3 of the energy used in schools is electricity and 1/3 is natural gas with trace amounts of the other energy sources. Of interest in this figure is that the heating fuels other than natural gas (propane, fuel oil, and coal) have all decreased. This is not unexpected as renovations when completed likely replace these older heating fuels and systems with modern systems fueled primarily by electricity and natural gas..

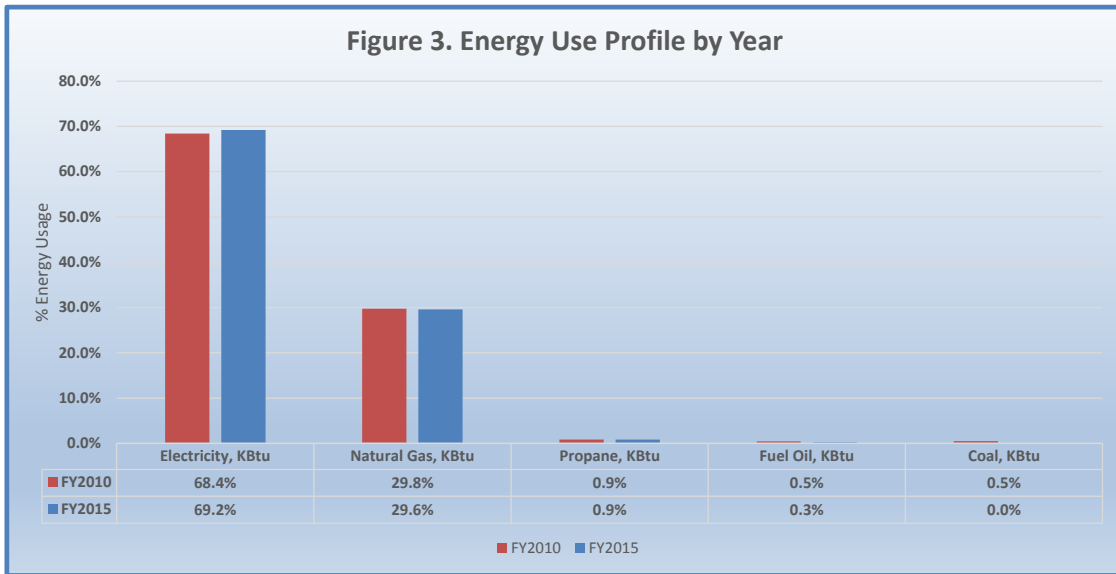

Figure 4 shows the statewide Average Energy Cost per KBtu of energy over the last 6 years. On average the cost per energy unit which schools use is increasing at greater than 3.0% per year. Holding the line on an increased total expenditures will be increasingly harder as the Commonwealth’s utilities comply with the Federal Clean Power Plan.

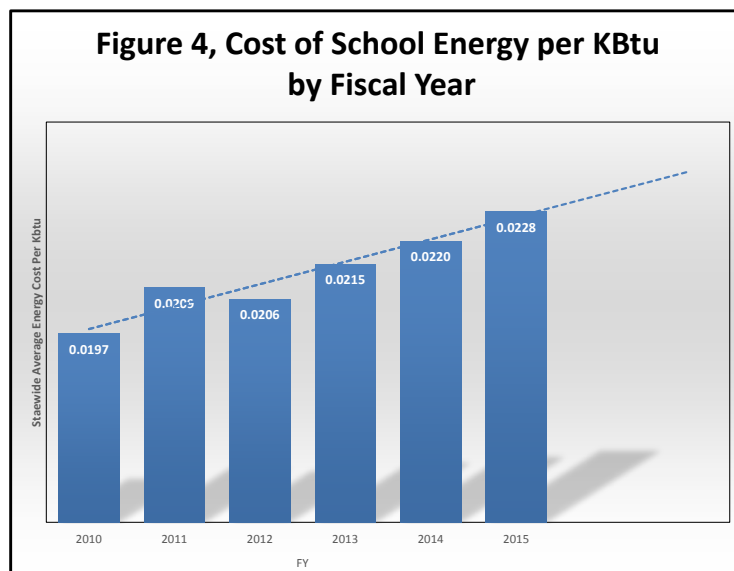

Figure 5 shows the Individual Base per unit fuel costs over the last 6 years. This graph shows the increase in electricity, propane and fuel oil costs. Coal costs have been relatively stable over this time period. Natural gas costs initially decreased sharply and have now begun to slowly rise.

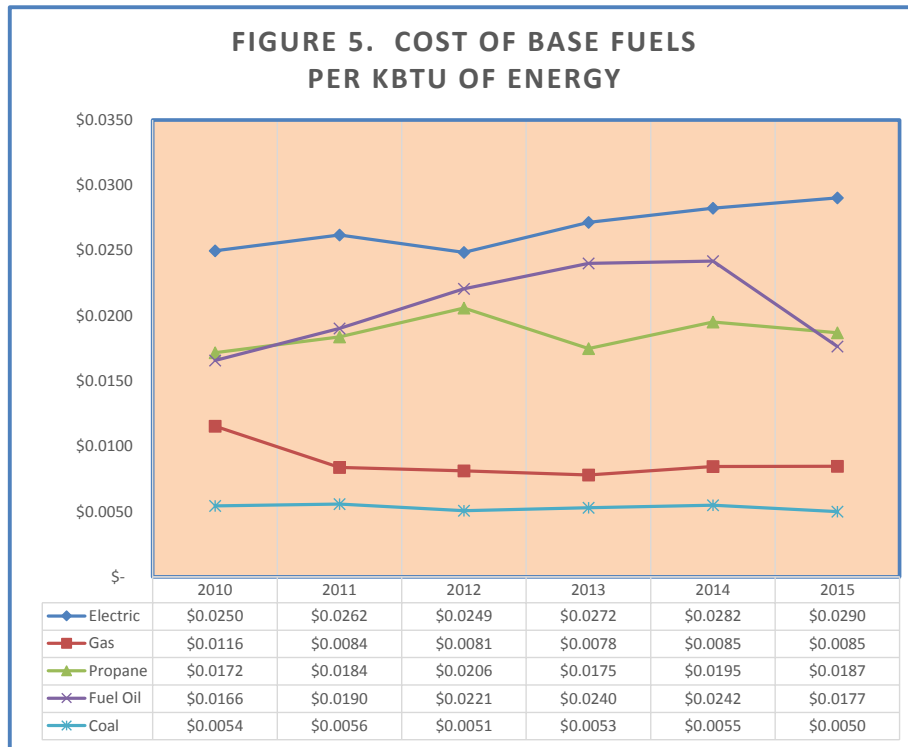

Figure 6 provides a statewide view of the % Change in EUI by the individual school districts. Since the base year, 147 of Kentucky's 173 school districts have improved their overall Energy Use Intensity (EUI).

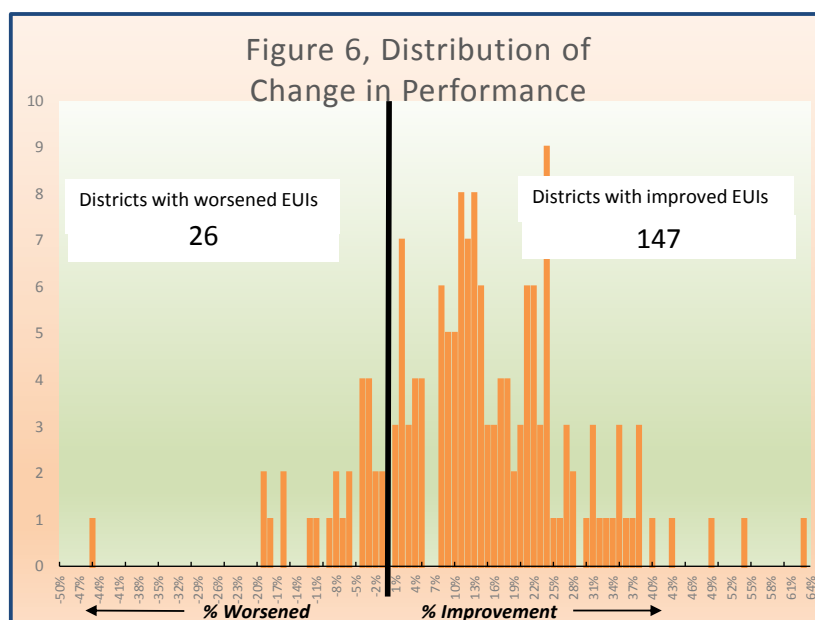

Figure 7 shows a weather normalized EUI by fiscal year using a linear regression. This regression analysis was made using heating (energy required to heat buildings) and cooling (energy required to cool buildings) degree days. Degree days are essentially a simplified representation of outside air-temperature data. They are widely used in the energy industry for calculations relating to the effect of outside air temperature on building energy consumption.

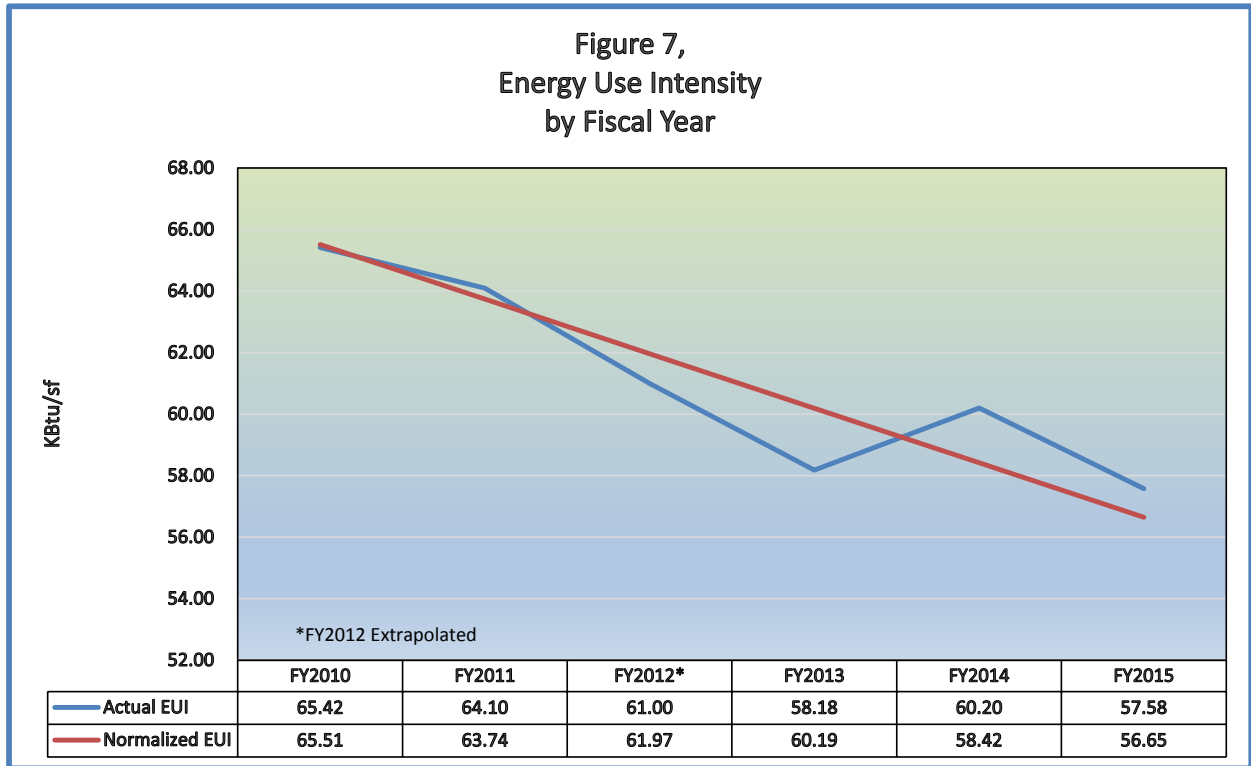

Table 2 shows a ranking of school districts based on their 2015 EUI. Since the start of the School Energy Manager Program, 146 of the 173 school districts have reduced their overall EUI. Kentucky currently has four districts with an overall EUI below 40KBtu/SF and 45 Districts operating with an EUI below 50KBtu/SF.

Table 2, District Ranking By Energy Use Intensity															
Rank	District	2010 EUI	2015 EUI	Rank	District	2010 EUI	2015 EUI	Rank	District	2010 EUI	2015 EUI	Rank	District	2010 EUI	2015 EUI

One of the data verification tests is to compare the expenditures data submitted in MUNIS with the data submitted on the Energy Management Report Template. MUNIS is the financial software package used in all 173 Kentucky School Districts. MUNIS only tracks account codes and dollars and as such is not useful as an energy tracking database.

Figure 8 shows a graph of the MUNIS reported school energy costs from fiscal year 2000 through fiscal year 2015. This graph shows that these costs had nearly doubled between fiscal years 2000 and 2008. The timing of House Bill 2 (later KRS160.325) could not have been better in recognizing those rising energy costs. That legislation coupled with the School Energy Manager Program in 2010 has led to several years of relatively flat energy costs for schools. The red lines on the graph illustrate the projected trajectory of costs and the cumulative savings of over \$68 Million.

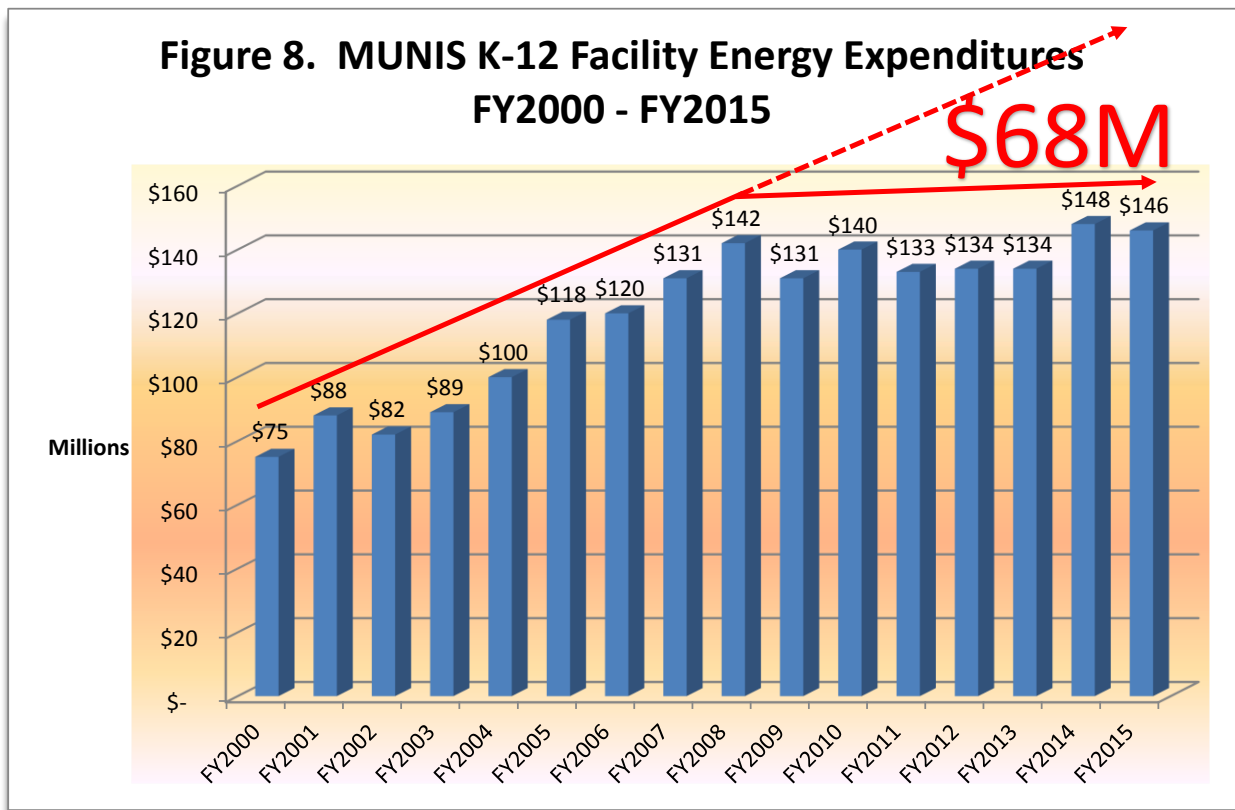

Table 3 shows Kentucky's Potential for Further Energy Savings based on 2015 utility rates. If all of Kentucky's School Districts operated at or below 50KBtu/SF, the incremental annual savings would be over \$21 million. If all of Kentucky's School Districts operated at or below 40KBtu/SF, another \$22 million could be saved annually. This has the potential to save as much annually as saved cumulatively to date. While this is an aggressive goal, it illustrates that there still remains ample opportunity for public schools to mitigate rising energy costs.

Table 3. Annual Energy Savings Potential			
Level	EUI	Incremental Savings	Annual Savings
Current	57.5		\$16.4M
ENERGY STAR	50	\$21.1M	\$37.5M
Best Performer	40	\$21.5M	\$59.0M

At the time of enactment of KRS160.325 there were 12 ENERGY STAR labeled K-12 schools in the Commonwealth. Today there are 292, making Kentucky second in the nation on a percentage basis. Figure 9 shows Kentucky's relative position and Table 4 is a listing of K-12 ENERGY STAR labeled schools by district.

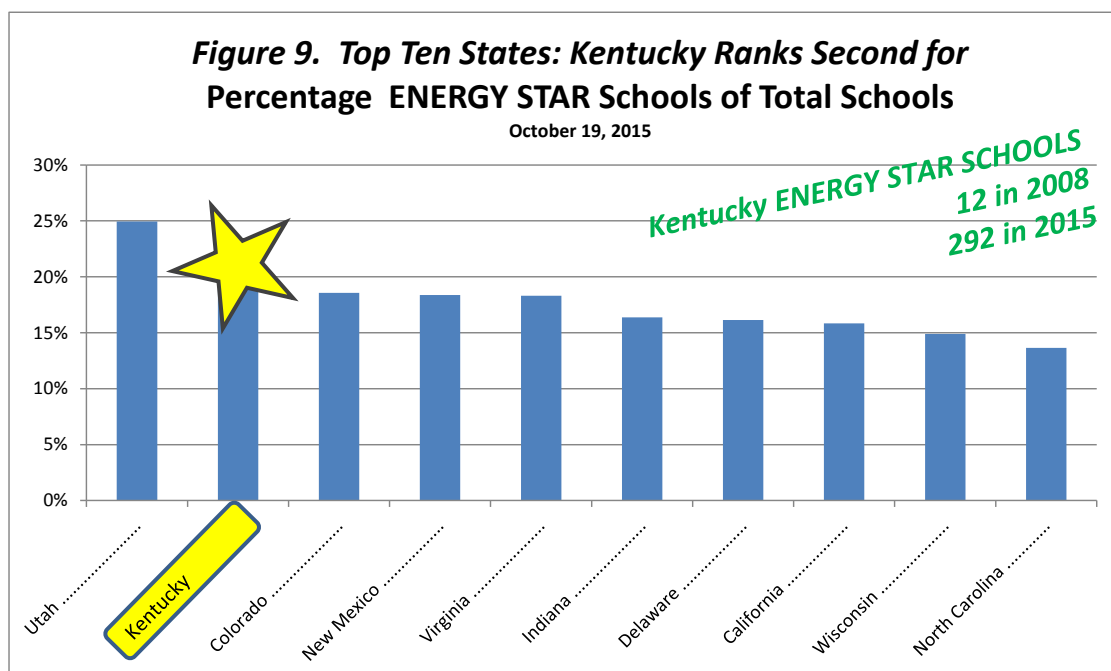

Table 4, Kentucky K-12 ENERGY STAR Labeled Schools
